

# SludgeFlow™ 3000

*SludgeFlow™ 3000 liquefies hydrocarbon sludge and delivers fast, safe, and cost effective de-sludging of major production, shipping, and storage assets.*

## What SludgeFlow™ 3000 delivers:

SludgeFlow 3000 liquefies hydrocarbon sludge - all types of sludge from paraffinic and heavy crudes to natural bitumens and processed tars. The speed and conditions in which SludgeFlow works make it an ideal product to quickly de-sludge large scale production, storage and shipping assets. Working quickly in cooler operating conditions, SludgeFlow can eliminate the time and people intensive cleaning processes currently used. Further, SludgeFlow 3000 helps condition and convert thick heavy sludge into recovered hydrocarbon that can often be pulled back into upgrading facilities or sold as Bunker C Fuel. Plus, SludgeFlow 3000 is among ENTECH's most price aggressive products ever developed. SludgeFlow is easy to incorporate into existing processes or can become the cornerstone of a new, fast and safe sludge busting process - save time and money with SludgeFlow 3000.

## Benefits:

- Quickly de-sludge tanks and vessels
- Dramatically improve equipment availability
- Reduces cleaning time and cost
- Reduce or eliminate heat from sludge handling
- Non-toxic, safe to handle

## Applications:

- Large tank farms
- Shipping and transfer stations
- Oil production ships
- Sludge remediation plants
- Oil tankers
